The Helmet Strap Quick-Release Buckle makes securing and releasing your helmet a quick and easy process.

To install the Quick-Release Buckle:

1. The Quick-Release Buckle is comprised of two parts, the Ratchet Tab and the Ratchet Catch.

2. First, attach the Ratchet Tab to the helmet strap (side without the “D” rings) by looping the strap through the retainer mechanism and tightening as shown.

3. Then, install the Ratchet Catch on the opposite helmet strap. The Ratchet Catch has a slot cut in it. Slip the loop of the helmet strap through the slot and slide the Ratchet Catch onto the strap as shown, be sure that the strap is completely over the back bar of the Ratchet Catch and that the slot is covered by the strap.

4. Snug the helmet strap buckle up close to the Ratchet Catch by sliding the buckle and pulling the straps in the opposite direction.

5. Insert the Ratchet Tab into the Ratchet Catch and adjust the strap as necessary for a secure fit. Pull the orange strap on the Ratchet Catch for a Quick Release.
